THONOTOSASSA, FL 33592

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions
THONOTOSASSA CHURCH OF GOD DC, PWS ID 6294913

Dear THONOTOSASSA CHURCH OF GOD:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions
TAMPA BAY FISHERIES INC, PWS ID 6291852

Dear TAMPA BAY FISHERIES INC:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

VALRICO, FL 33596

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions
HCPRD/BEALSVILLE COUNTY PARK, PWS ID 6290127

Dear HILLS CTY PARKS & REC DEPT:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

TAMPA, FL 33614

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions
LINEBAUGH BUSINESS CENTER, PWS ID 6295428

Dear RMC ROSS REALTY:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

TIM'S MEMORIAL PRESBYTERIAN CHURCH
601 SUNSET LANE
LUTZ, FL 33549

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions
TIM'S MEMORIAL PRESBYTERIAN CHURCH, PWS ID 6294575

Dear TIM'S MEMORIAL PRESBYTERIAN CHURCH:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

Dear TRIPLE L TRANSPORTATION & SERVICES:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov

Re: Radionuclides Rule Revisions for Nontransient Noncommunity drinking water systems and Grandfathering Provisions
WILDER ROAD CAMP, PWS ID 6296163

Dear FLORIDA PACIFIC FARMS LLC:

The Florida Administrative Code, Chapter 62-550.310, 62-550.519 and 62-550 Tables 7 and 8 were revised and became effective June 24, 2014. The revisions require non-transient non-community water systems to begin monitoring for Gross Alpha, Radium 226, Radium 228 and Uranium in 2016. Initial monitoring will be for four quarters beginning January 1, 2016.

Chapter 62.519 allows systems to use historical data taken between January 1, 1996 and December 31, 2015 to reduce the monitoring to sampling once in 2016:

- You must have one sample from each point of entry for gross alpha and radium 228
- The Gross Alpha must be below 15 pCi/L
- You must either have sampled for radium 226 or substitute gross alpha if it is less than 5 pCi/L.
- The combined value for radium 226 and radium 228 must be below 5 pCi/L

We have reviewed your water systems past sampling records and in order to be grandfathered in and avoid the 4 quarters of initial monitoring in 2016 you must sample for Radium 228 by December 31, 2015 and submit the results to our office by January 10, 2016. The results must meet all the criteria listed above.

If you have any questions on the sampling requirements or new revisions to Florida Administrative Code 62-550, please contact me at 813-307-8015, ext. 5934 or by email at therese.ladouceur@FLHealth.gov
